Office Action Summary

Art Unit: 2837

1. In the first sentence of the specification, this application should be referred to as a "division" of its parent application. It is not a "divisional continuation".
2. The substitute specification has been entered.
3. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.
4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 1-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 1 and 2, "a low-frequency oscillator" is not an alternative and functional equivalent of "a transient generator". This is improper alternative claiming. It is also not a proper Markush Group.

There is no common characteristic between the two elements. It is an improper Markush form. A similar improper arrangement exists in claim 5. Also, "at least two control signals" has no clear antecedent. The depending claims 3, 4 and 6 fall with their parent. The meets and bounds of the claims are not clear.

Art Unit: 2837

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7. Claims 1-6 are rejected under 35 U.S.C. 102(b) as being fully met by Sgroi.

This patent discloses a MIDI sound designer with a randomizer which reads on applicant's transient generator. Numerical operations are applied to control signals.

8. Claims 1-6 are rejected under 35 U.S.C. 102(a) as being fully met by Hewitt.

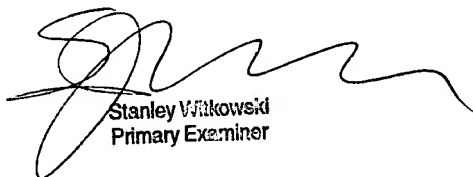

This patent discloses a wavetable burst controller reading on applicant's transient generator. A MIDI environment is provided.

Numerical operations are applied to control signals.
